## DETAILED ACTION

### *Election/Restriction*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-21, 25, 45, and 46, drawn to an isolated polynucleotide, vector, and host cell, classified in class 435, subclass 252.3.
  - II. Claims 22-24, drawn to a coryneform bacterium comprising an attenuated lysR3 gene, classified in class 435, subclass 252.1.
  - III. Claims 26-28, drawn to a process for producing L-amino acids comprising culturing a bacteria comprising an attenuated lysR3 gene, classified in class 435, subclass 106.
  - IV. Claims 39 and 40, drawn to a process for screening for polynucleotides which encode a protein having LysR3 transcriptional regulatory activity by hybridization, classified in class 435, subclass 6.
  - V. Claims 41 and 43, drawn to a method for detecting a nucleic acid using a probe or primer, classified in class 435, subclass 91.2.
  - VI. Claims 42 and 44, drawn to a method for producing a nucleic acid using a probe or primer, classified in class 435, subclass 91.2.

2. The inventions are distinct, each from the other because of the following reasons:  
Inventions of Groups I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). The products of Groups I and II are independent chemical entities and require different literature searches.

Inventions of Groups III-VI are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). The methods of Groups III-VI are distinct both physically and functionally; require different process steps, reagents, and parameters; and produce different products.

Invention of Group I is unrelated to the processes of Groups III-VI. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP

Art Unit: 1652

§ 808.01). Each of the processes of Groups III-VI do not require the product of Group I.

Inventions II and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product as claimed can be used in a materially different process of using that product such as using the coryneform bacterium of Group II in a recombinant process to make a polypeptide.

A search of all the inventions in the patent literature and the non-patent literature cannot be made without serious burden because the inventions require separate searches that have different limits, boundaries, scope, and subject matter. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their divergent subject matter, restriction for examination purposes is proper.

3. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).
